

CLAIMS

I claim:

1. A watering jug for watering plants, comprising:

a container for holding water, having a top with a small central hole defined therein for use in filling the jug;

a plurality of supports at bottom of the container, for holding the watering jug in an upright position; and

a delivery pipe and valve combination near the bottom of the container having a pin-sized hole of a predetermined diameter so as to allow trickling of water, for steady and uninterrupted watering of the soil around the plants.

2. The watering jug for watering plants according to claim 1, further comprising a stepped up bottom.

3. The watering jug for watering plants according to claim 1, further comprising a slopped bottom.

4. The watering jug for watering plants according to claim 1, further comprising a removable cap for the delivery pipe and valve combination.

5. The watering jug for watering plants according to claim 1, further comprising a twist type delivery pipe valve combination for closing the pin-sized opening.
